Petition in Opposition to the Titan Cement Plant

Instructions: Please have signers clearly print their information in the spaces provided. Return completed petitions to: STAN Coordinator, The Landing Suite B-2, 530 Causeway Drive, Wrightsville Beach, NC 28480

Top Ten Reasons to Stop Titan:

10. **Be one of the largest cement manufacturing and strip-mine facilities in the nation**.
9. **8,500 school children** will be within 5 miles of the site. Children are especially susceptible to pollutants.
8. Nearly **350 tons of particulate matter** will be emitted annually, increasing the risk of premature deaths from heart attacks, strokes and asthma.
7. **410 foot smokestack** will emit toxic pollutants in to our air each day.
6. More than **200 local physicians, hundreds of medical professionals, more than 8,000 community members** are in opposition.
5. **2nd highest mercury emitting facility** in New Hanover County. New Hanover County already has some of the highest mercury emissions in the state.
4. **Create a 2500 + acre mine, over 70-feet deep that would destroy over 1000 acres of irreplaceable wetlands**.
3. **Millions of gallons of water** will be withdrawn from the Castle Hayne and/or Pee Dee aquifers lowering the local water table and risking contamination of a major source of drinking water for the area.
2. **Would not guarantee local jobs** and is not enough economic incentive to out-weigh the health, environmental and quality of life costs to our community and region.
1. **The people of the Cape Fear Region deserve better.**

We the undersigned oppose the building of the Titan Cement Plant
